

Write a command for this scenario ?

Enable ssh for three user with username password

Command line interface

Theory:-

- Step: 1 - change the router hostname .eg: R0.
 Step: 2 - set the domain for the router .eg:
 ip domain-name VK.com.
 Step: 3 - ~~crypto~~ generate crypto key for router
 Step: 4 - Tel SSH version to router.

Code:-

```
Router > enable
Router # configure terminal
Router (config) # hostname R0
R0 (config) # ip domain-name vk.com.
R0 (config) # crypto key generate tozq.
R0 (config) # 512... 1024
R0 (config) # ip ssh version 2
R0 (config) # username user1 password 12345
R0 (config) # username user2 password 12345
R0 (config) # username user3 password 12345
R0 (config) # line vty 0 2
R0 (config-line) # transport input ssh.
R0 (config-line) # login local.
R0 (config-line) # exit.
```
